

CUSTOMER SUCCESS STORY

Afrihost Turbocharges the Internet

Subscribers receive 300 free Turbocharge minutes a month

Afrihost works with Sandvine to deliver premium DSL services to South Africa. As a semi-shaped product, Afrihost prioritizes real-time services, like streaming video, during peak-times on the network. This means that large downloads may be shaped during peak periods to ensure that all customers have a high quality experience.

With Turbocharge, Afrihost customers can remove all shaping protocols on their internet connection for 60 minutes and achieve the fastest download speeds possible.

Optimize Data Traffic

Afrihost leverages Sandvine's Policy Traffic Switch (PTS) to manage Internet traffic for thousands of customers daily.

The PTS identifies traffic and enables policy enforcement to prioritize real-time applications and ensure that Afrihost customers receive the highest quality Internet experience.

Turbo Speeds

When an Afrihost subscriber activates a Turbocharge session, all shaping protocols are removed for 60 minutes, enabling subscribers to experience the fastest DSL speeds possible.

Subscribers on the Uncapped plan receive 5 free Turbocharge Sessions a month and can purchase additional sessions.

Innovation

"Sandvine's real-time traffic management capabilities allow Afrihost to provide unique services while achieving the highest quality Internet experience for customers"

*- Brendan Armstrong,
Chief Technology Officer*

About Afrihost

Based in Rivonia, South Africa, Afrihost was started in 2000 as a hosting company and later started to venture into the DSL space with the revolutionary launch of ADSL at R29/GB (a first at the time). Afrihost has now added Mobile Data to its product offerings.
