

CUSTOMER SUCCESS STORY

# Eastlink Delivers High Quality VoLTE

## Sandvine's PCRF ensures exceptional call quality

Eastlink is committed to delivering the best wireless experience. That's why they selected Sandvine's Service Delivery Engine as the VoLTE PCRF to enable and to assure the quality of the Canadian communications service provider's new Voice over LTE (VoLTE) service.

### Enabling VoLTE

Sandvine's PCRF - the Service Delivery Engine (SDE) - enables a number of VoLTE-specific use cases, including assuring quality of service (QoS) for voice calls.

In this deployment, the SDE ensures that VoLTE calls are prioritized appropriately across the Eastlink network for maximum quality.

### A Superior Experience

Eastlink is committed to providing customers with the best possible wireless experience.

Sandvine's PCRF ensures Eastlink's VoLTE customers receive exceptional call quality and a significantly faster call connection time over analog systems.

### Unmatched Quality

*"Sandvine's PCRF will play a key role in ensuring our customers enjoy a superior experience when making VoLTE calls."*

- Matthew MacLellan  
President

### About Eastlink Wireless

Founded in 1970, Eastlink is Canada's largest family-owned and operated telecommunications provider.

Eastlink is headquartered in Atlantic Canada and employs over 1,700 people across Canada. Eastlink has also held the designation as one of Canada's 50 Best Managed Companies for nine consecutive years.
