

CUSTOMER SUCCESS STORY

# GCI Keeps Subscribers up-to-date on Data Usage

Check your usage  
with the GCI Mobile  
Usage Viewer app.

## GCI Mobile Usage Viewer app lets subscribers stay on top of mobile data usage

GCI knows that informed subscribers are happy subscribers, so they introduced an app to keep subscribers up-to-date on their mobile data usage.

Available for iOS and Android devices, this app provides quick and easy access to a subscriber's mobile data usage through easy-to-read charts and graphs.

### Subscriber Convenience

GCI is committed to providing a superior customer experience, and believe that *Mobile Usage Viewer* app will help subscribers to make informed choices about which wireless data plans best fit their usage patterns.

### Sandvine Data

The *Mobile Usage Viewer* app shows data that is collected by Sandvine's Quota Manager.

Quota Manager counts subscriber usage and can enable valuable services including shared data plans and precise zero-rating.

### Propel Your Network

*"Sandvine's intelligence layer has helped propel our network capabilities so our customers can use the latest devices on the largest and fastest data network in Alaska."*

- Brandy Goss-Crum  
Director, Product Management and  
Development

#### About GCI

GCI is an Alaska-based company providing voice, video, and data communication services to residential, commercial, and government customers across a converged multi-access (2G, 3G, LTE, Cable) network.

Since its founding in 1979, GCI has grown to become a premier integrated telecommunications provider.

Can your subscribers easily access their usage? Visit [www.sandvine.com](http://www.sandvine.com)
