

## Paratus Telecom Gives Subscribers Their Flix

### Innovative LTE plan includes 100 GB of Netflix data

When Paratus Telecom needed a PCRF to enable subscriber services on their newly launched LTE network, they chose Sandvine's Service Delivery Engine (SDE). Only Sandvine delivers the agility Paratus need to rapidly launch new subscriber services and out-innovate the competition.

#### LTE Services

The Sandvine Service Delivery Engine is powering Paratus Telecom's prepaid and postpaid LTE services.

The SDE can also enable voice-over-LTE services, so Paratus is well-prepared.

#### Getting Their "Flix"

For a low monthly fee, the "Flix" plan provides subscribers with 5GB to use on any application they see fit, and 100GB of data to use exclusively on Netflix, allowing them to binge-watch hours of their favorite movies and television shows.

#### Unique Agility

*"The tight integration between Sandvine's traffic classification, PCRF, and PCEF solution allows us to rapidly enable and update the service plans our subscribers are looking for."*

- Schalk Erasmus  
COO

#### About Paratus Telecom

Since its inception in 2005 (as Internet Technologies Namibia), Paratus Telecom has established a prolific network extending through all of Namibia, with additional international points-of-presence located in Johannesburg (South Africa), Lisbon (Portugal) as well as London (UK).
