

# TextNow Helps Mobile Customers Save and Do More

## Bringing innovation and cost savings to the mobile market through a virtualized platform

TextNow is deploying Sandvine's Virtual Series—the completely virtualized version of the Sandvine Platform—to rapidly enable new subscriber services and deliver cost savings to consumers.

### The "Do More" Platform

In deploying the Sandvine Virtual Series, TextNow benefits from the flexibility afforded by this virtualized solution to quickly and cost-effectively scale up to prepare for their subscriber growth, launch new services on-demand, and enable other Sandvine solutions according to the dynamic needs of their business.

### Rapid Service Innovation

Standing out in a crowded market means being able to do things differently—and quickly.

Sandvine's Usage Management Product, PCRF, and ServiceDesigner interface combine to provide TextNow with a comprehensive service innovation toolkit, including a service definition and deployment interface; quota management, service tiering, and bolt-on capabilities.

### An Amazing Experience

*"TextNow is excited to work with Sandvine to optimize our service behind the scenes and provide our subscribers with an even more amazing mobile experience at affordable prices as we continue to grow."*

- Derek Ting  
CEO and Co-Founder

### About TextNow

TextNow is making mobile phone service ultra-affordable through its unique cloud based technology. Through TextNow Wireless and the free TextNow app, the company provides millions of users a better and more affordable alternative to traditional wireless plans and services.
