

Intelligent Broadband Networks

Get to know your subscribers and your network, so you can make informed decisions

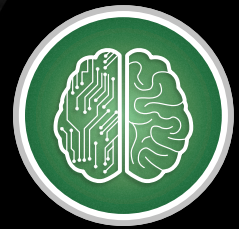

Business intelligence empowers you to make decisions based on facts, rather than assumptions and guesses.

Of course, business intelligence is only useful if the data foundation is trustworthy and the information can be accessed by those who need it, when they need it.

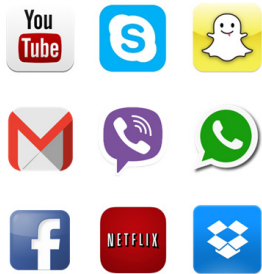

At Sandvine, we take accuracy seriously: our stats are publicly scrutinized in our industry renowned Global Internet Phenomena report.

Plus, we want people to be able to see our data – that's why we have graphical tools, powerful APIs, and configurable data records.

Do more, with Sandvine.

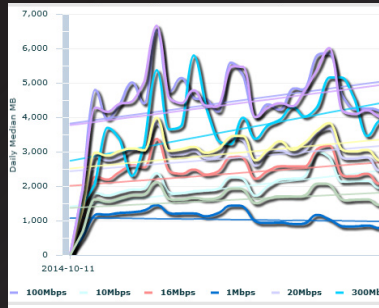

Business Intelligence

The Best Classification

Base your decisions on the industry's best data foundation.

Regular traffic identification packs mean that our customers routinely enjoy recognition of more than 95% of Internet traffic, including more than 1,300 encrypted services, and the hottest new arrivals.

Powerful Data Solutions

Explore your network's past, present, and future with real-time visibility, on-demand historical reports, and powerful analytics.

Plus, our configurable data records can provide a constant stream of information for your big data and CEM initiatives.

Unique QoE Metrics

Bolster your CEM initiatives with insight into subscriber quality of experience (QoE) metrics.

These metrics combine detailed measurements into unique quality scores that let you understand the subscriber experience for video and audio streaming, web browsing, VoIP, and even Speedtest.net.
